

FlavorMap — Fieldwork Pack

The domestic register · Nakhon Ratchasima & Buri Ram · Bible v4 §10
Prepared 29 September 2026 · print this pack before the first interview

Two things to settle before you print.

1. The provinces changed.

Bible v4 §10 specifies Nan and Surin. This pack is built for Nakhon Ratchasima and Buri Ram. That is a defensible change but the stated rationale must change with it — see the box below — and it needs a dated entry in docs/decisions.md before fieldwork starts, not after.

2. Questions 1, 2, 4, 5, 6 and 7 are drafts.

Bible v4 says the first eight questions are retained verbatim from v2, but v2 is not in the repo and v3/v4 only describe Q3, Q4 and Q8 rather than quoting them. Check these six against the v2 document and replace any that differ. Q9 and Q10 are quoted verbatim from v4 and are correct as printed.

Why these two provinces

The v4 rationale — *one Northern, one lower-Isaan, both peripheral* — no longer applies. The replacement rationale is not a weaker one:

Axis	Nakhon Ratchasima	Buri Ram
Position	Gateway to Isaan; largest city; closest to Bangkok	Peripheral; far from the commercial register's centre of gravity
Dialect group	Khorat Thai	Northern Khmer / Lao-Isaan
Predicted acquisition	Higher market + packaged share	Higher grown + foraged share
Serves	A centre-versus-periphery pair inside one region, across a dialect boundary. Migration 013 (dialect_group_taxonomy) already supports this axis.	

This states the TunDee thesis directly — *the gap widens with distance from the centre* — in the food domain, which is exactly the connective tissue §24 asks for. Write the comparison up as within-Isaan, centre versus periphery. Never as a national claim.

Trips and counts

Province	Interviews	Trips	Shape
Nakhon Ratchasima	6 minimum	0 — local	Spread across 2–3 weekends. No travel cost, no overnight, reschedulable if one falls through
Buri Ram	6 minimum	2 weekends	Trip 1: pilot the protocol on informant 1, then 3 interviews. Trip 2: remaining interviews, follow-ups, cook one dish with a cook

Total: 12 interviews, 2 overnight trips. Do the first two Korat interviews before the first Buri Ram trip — a protocol that fails should fail 40 minutes from home, not after a two-hour drive.

Do not add provinces.

Six per province is what supports the defensible sentence (*six of six cooks in Buri Ram named an ingredient no register associates with the province*). Spreading twelve interviews across four provinces supports nothing, and the limitations register already commits to the domestic register covering two provinces of 77. Adding a third province is scope creep that costs depth and buys no claim.

Before the first interview

- ☐ Log the province change in docs/decisions.md with the rationale above and the alternative rejected (Nan + Surin)
- ☐ Reconcile Q1, Q2, Q4, Q5, Q6, Q7 against the v2 protocol
- ☐ Commit docs/hypotheses.md with the predictions on the last page of this pack — dated, before any interview
- ☐ Print 15 consent forms (page 2) and 14 protocol sheets (pages 3–4)
- ☐ Fill in the three government dishes per province on page 5, from the dcp_food records
- ☐ Confirm a parent chaperones every interview and can drive to Buri Ram on both dates
- ☐ Charge the camera. Mise en place matters more than the finished dish

หนังสือยินยอมเข้าร่วมการเก็บข้อมูล

FlavorMap — งานวิจัยเรื่องอาหารพื้นถิ่นไทย · print 15 copies · one signed copy per informant, one left with them

โครงการนี้คืออะไร

หนูเป็นนักเรียนชั้นมัธยมศึกษาปีที่ 4 กำลังทำงานวิจัยเรื่องอาหารพื้นถิ่นของแต่ละจังหวัดในประเทศไทย โดยเปรียบเทียบข้อมูลจากสามแหล่ง คือ เอกสารของทางราชการ สูตรอาหารบนอินเทอร์เน็ต และอาหารที่คนทำกินกันจริงที่บ้าน

หนูจะขออะไรจากท่าน

ขอพูดคุยประมาณ 60–90 นาที เรื่องอาหารที่ท่านทำกินเป็นประจำ ส่วนผสมที่ใช้ และที่มาของวัตถุดิบแต่ละอย่าง ท่านไม่ต้องเตรียมอะไรล่วงหน้า

ข้อมูลของท่านจะถูกใช้อย่างไร

หนูจะบันทึกเฉพาะชื่อจานอาหาร ส่วนผสม อำเภอ และจังหวัดเท่านั้น

ชื่อ ที่อยู่ และเบอร์โทรศัพท์ของท่านจะไม่ถูกบันทึกลงในฐานข้อมูล และจะไม่ถูกเผยแพร่

ในงานที่เผยแพร่ ท่านจะถูกอ้างถึงด้วยบทบาทและจังหวัดเท่านั้น เช่น “แม่ครัวในจังหวัดบุรีรัมย์” เว้นแต่ท่านอนุญาตให้ใช้ชื่อจริง

การบันทึกเสียงและภาพถ่าย

หนูจะไม่บันทึกเสียงหรือถ่ายภาพใด ๆ หากท่านไม่อนุญาต

☐ อนุญาตให้บันทึกเสียง ☐ ไม่อนุญาต

☐ อนุญาตให้ถ่ายภาพอาหารและวัตถุดิบ ☐ ไม่อนุญาต

☐ อนุญาตให้ใช้ชื่อจริง ☐ ขอให้ใช้เพียงบทบาทและจังหวัด

สิทธิของท่าน

ท่านสามารถไม่ตอบคำถามข้อใดก็ได้ และสามารถหยุดการสนทนาเมื่อใดก็ได้ โดยไม่ต้องให้เหตุผล หากภายหลังท่านเปลี่ยนใจ ท่านสามารถแจ้งให้ลบข้อมูลของท่านออกได้ การดำเนินการทั้งหมดเป็นไปตามพระราชบัญญัติคุ้มครองข้อมูลส่วนบุคคล พ.ศ. 2562 (PDPA)

สิ่งที่ท่านจะได้รับ

เมื่องานเสร็จ ท่านจะได้รับแผนที่อาหารที่สร้างขึ้นจากงานวิจัยนี้ และสำเนาสูตรอาหารของท่านเองตามที่ปรากฏในชุดข้อมูล

ชื่อผู้ให้ข้อมูล	_____	วันที่	_____
ลายมือชื่อ	_____	อำเภอ	_____
ผู้ปกครองที่อยู่ด้วย	_____	จังหวัด	_____
ผู้เก็บข้อมูล	_____	ติดต่อ	_____

Not for the informant — for you. This sheet carries a name, a signature and possibly a phone number. It is personal data under PDPA and must never be photographed into the repo, typed into a table, or stored anywhere under data/. Keep the signed forms on paper, offline. The database gets district, province and role — never the person.

Interview protocol – sheet 1 of 2

Print 14 · one pair of sheets per interview · 60–90 minutes · record district, not just province

Informant #	Role	Date
District		Province

Q1 · the dish · feeds RQ3

งานไหนที่คนแถวนี้ทำกินบ่อยที่สุดคะ แล้วคุณทำยังไงคะ

Which dish do people around here cook most often? How do you make it?

Q2 · provenance and generation · feeds RQ5

ใครสอนคุณทำงานนี้คะ เขาทำเหมือนที่คุณทำไหมคะ

Who taught you this dish? Did they make it the same way you do?

Q3 · substitutions · retained from v2 · collected even though the graph analysis is out of scope

ถ้าหาของบางอย่างไม่ได้ คุณใช้อะไรแทนคะ

If you can't get one of the ingredients, what do you use instead?

Q4 · boundary markers · feeds RQ2, presence side

จานนี้ของแถวนี้ ต่างจากที่อื่นยังไงคะ

How is this dish here different from the same dish elsewhere?

Q5 · acquisition mode · use the government's four categories verbatim · feeds Figure 7

ของแต่ละอย่างได้มาจากไหนคะ ปลุกเอง หาเอาจากป่า ซื้อจากตลาด หรือซื้อแบบสำเร็จรูป

Where does each ingredient come from — grown, foraged, market, or packaged?

[illegible]

Interview protocol — sheet 2 of 2

Informant # _____ · continue from sheet 1

Q6 · season and occasion · matches the government "occasion" field

ปกติทำจางานนี้ตอนไหนคะ มีฤดูกาลหรืองานบุญอะไรเป็นพิเศษไหมคะ

When do you normally make this? Is there a season or an occasion for it?

Q7 · everyday versus guest food · feeds RQ3

อาหารที่บ้านกินกันเองทุกวัน กับอาหารที่ทำเลี้ยงแขก ต่างกันยังไงคะ

How is the food you eat at home every day different from what you cook for guests?

Q8 · retained from v2 · the most valuable question in the protocol

ร้านอาหารทำจางานนี้ผิดตรงไหนคะ

What do restaurants get wrong about this dish?

Q9 · stated absences · verbatim from Bible v4 §6 · feeds RQ2, absence side

อะไรที่คนจังหวัดอื่นใส่ในจานนี้ แต่บ้านเราไม่มีวันใส่?

What do people in other provinces put in this that we would never put in?

Test this wording on informant 1. v4 is explicit that the phrasing decides whether the answer is real or merely polite. If the first answer is a shrug or a courtesy, rewrite it before informant 2 and log both versions in decisions.md. Every row of stated_absences.csv comes from this one question, and that file exists nowhere else in the world.

Q10 · endangerment · verbatim from Bible v4 §10 · feeds RQ5 · ask about the three government dishes specifically

จานนี้ยังมีคนทำอยู่ไหม? ใครทำ? คนรุ่นใหม่ทำเป็นหรือเปล่า?

Does anyone still make this? Who? Do younger people know how?

Government dish (fill from dcp_food)	Still made?	By whom?	Younger people?

Ask Q10 against the three dishes the state listed for *this* province, so RQ5's comparison is dish-matched rather than general. Fill the left column in before the interview.

Close the interview with this, not with a question: tell them what happens next — that they will receive the map and a printed copy of their own recipe. Reciprocity is in the ethics commitment, and it is also the reason the second interview in a village is easier to arrange than the first.

The three government dishes, per province

Fill this in before you travel · from the 231 dcp_food records · RQ5 depends on dish-matched comparison

RQ5 compares the state's endangerment_level against what cooks say about **the same dishes**. That only works if you know, before the interview starts, which three dishes the government listed for the province you are sitting in. Pull them with:

```
docker compose exec db psql -U flavormap -d flavormap -P pager=off -c \  
"SELECT p.name_th, r.name_th FROM recipes r  
  JOIN province_attribution pa USING (recipe_id)  
  JOIN provinces p ON p.province_code = pa.province_code  
 WHERE p.name_th IN ('นครราชสีมา', 'บุรีรัมย์');" 
```

Nakhon Ratchasima · นครราชสีมา

#	Dish · ชื่อจาน	Official endangerment level	Cook-reported status (fill in the field)
1			
2			
3			

Buri Ram · บุรีรัมย์

#	Dish · ชื่อจาน	Official endangerment level	Cook-reported status (fill in the field)
1			
2			
3			

Verify the endangerment levels by eye first. They come from Wingdings checkbox glyphs, which v4 §5 names as the most likely silent failure in the whole parser. Open the six source PDFs, read the ticked box yourself, and compare against what the database holds. If they disagree, RQ5 has no data and needs replacing — and that is much cheaper to discover at your desk than in someone's kitchen.

Fields to capture on every interview

Field	Why	Note
District	Isaan provinces are large; sub-provincial resolution costs nothing to record and cannot be backfilled	Not just province
Acquisition mode	Directly comparable with the government forms — 231 official records already carry it	Grown / foraged / market / packaged. Use these four words, not synonyms
Role of cook	The anonymised publication unit: "a cook in Buri Ram"	Role, never name
Register	recipes.register is NOT NULL and must be set explicitly	Every row from these interviews is domestic

Expected answers — read before, never during

Preparation and pre-registration · commit to docs/hypotheses.md, dated, before the first interview

Do not carry this page into the room. These are predictions, and a prediction read aloud becomes a leading question. Their value is that they are written down *before* the answers exist: that is what makes a null result publishable rather than embarrassing. Read them the night before, then leave the page at home. If you find yourself steering a cook toward one of these, you have converted evidence into confirmation.

Q	Expected answer	What it means if you're wrong
1	Korat: ผัดหมี่โคราช, ส้มตำ, แกงเห็ด. Buri Ram: ส้มตำ, ลาบ, แกงหน่อไม้, and at least one Khmer-influenced dish	If cooks name the same dishes the state listed, the official selection is accurate and RQ3's answer is "not much" — which validates the state's process and is still a finding
2	Mother or grandmother; and a stated difference — pounded not blended, more of one thing, less sugar	If nobody reports a difference across generations, RQ5's premise that practice is shifting weakens
3	ปลาร้า ↔ น้ำปลา; wild greens → market vegetables; seasonal swaps	If substitutions are idiosyncratic rather than patterned, that is a finding about how much of cooking is personal rather than regional
4	Korat: sweeter, less ปลาร้า, Central-influenced. Buri Ram: more ปลาร้า, more bitter and wild greens	If both describe themselves identically, the dialect-group axis does not carry culinary signal
5	The core prediction: Buri Ram higher on grown + foraged, Korat higher on market + packaged	If acquisition is flat across both, the centre-periphery framing fails and Figure 7 loses its point. This is the prediction most worth being wrong about
6	Rainy season for mushrooms and bamboo; specific dishes tied to งานบุญ	If there is no seasonal structure, the corpus's lack of a temporal dimension matters less than feared
7	Guest food richer and meatier; everyday food is น้ำพริก plus vegetables — and the everyday food is what's missing from the official register	If the state's three dishes are the everyday dishes, the heritage-selection bias RQ3 is built on does not exist here
8	"Too sweet." "Not enough ปลาร้า." "They use sugar instead of X"	If cooks think restaurants get it right, the commercial register is closer to the domestic one than RQ1 assumes
9	Korat cooks naming Isaan ingredients they'd never use; Buri Ram cooks naming the sweetness they associate with Korat. Expect refusals to be mutual and specific	If absences are vague or nobody can name one, RQ2's absence component has no validation data and stays inferred — weaker but still reportable
10	Disagreement, in one direction: cooks report more dishes disappearing than the state does. A provincial submitter has an incentive to present heritage as healthy; a cook has none	If cooks and the state agree, RQ5 validates the state's assessment process — a clean result, and the off-diagonal cells you hoped for simply aren't there

The sentence this fieldwork is trying to earn

Six of six cooks in Buri Ram named an ingredient that appears in no register for that province.

An existence claim, which $n \approx 6$ fully supports. Never a ranking of provinces, never a rate, never a percentage presented without the raw count beside it. That restraint is what makes the claim unobjectionable — and it is the same restraint that makes the limitations register read as confidence rather than hedging.

After each interview, same day

- ☐ Write up while it is fresh — memory degrades faster than you expect, and a reconstructed interview is a story, not evidence
- ☐ Load with register = 'domestic', never defaulted
- ☐ Record district and acquisition mode in the government's four categories
- ☐ Signed consent form filed on paper, offline — never under data/, never photographed into the repo
- ☐ make db-dump — from here on the database holds material that exists nowhere else
